Rajat Choudhary

Full Stack Engineer

TypeScript • React • MUI • NestJS • PostgreSQL • GCP / AWS

Chandigarh, India | +91 98764 11094 | rajrajatchoudhary4@gmail.com | X | LinkedIn | GitHub | Portfolio

SUMMARY

Full Stack Engineer with **4+ years** of experience building data-intensive SaaS applications, intuitive web dashboards, and high-throughput APIs using **TypeScript, React, MUI, NestJS, and PostgreSQL**. Specialized in multi-source data ingestion, third-party API orchestration, and tabular/spreadsheet workflows that eliminate manual data wrangling. Strong advocate of strongly typed architectures, opinionated frameworks, reactive stream transformations (**RxJS**), and advanced **SQL query optimization (reducing latency by up to 68%)**. Proven track record collaborating across remote and onsite teams with high autonomy, clear async communication, and end-to-end product delivery.

TECHNICAL SKILLS

Frontend:	**TypeScript, React.js, Material UI (MUI)**, Redux Toolkit, Reactive State Management, Data Visualizations (Chart.js), Tabular Grids, Component Lifecycle, Responsive Design
Backend & APIs:	**NestJS, TypeScript, Node.js**, Express.js, RESTful API Architecture, Webhooks, RxJS (Reactive Streams), Dependency Injection, Microservices Architecture
Databases & ORMs:	**PostgreSQL, SQL, JSONB, TypeORM, Prisma**, Composite Indexing, Query Optimization, Connection Pooling, Relational Data Modeling, Redis
Cloud & DevOps:	**GCP (Cloud Run, Cloud SQL)**, AWS (EC2, S3, RDS, SES, Cognito), Docker, CI/CD (GitHub Actions), Distributed Tracing, Structured Logging
Engineering:	Strongly Typed Systems, Functional & Reactive Programming, Multi-Source Ingestion, Automated Testing, Agile & Async Collaboration

EXPERIENCE

Senior Software Engineer | NLD India Software Pvt. Ltd. (Logistics SaaS) — May 2026 – Present | Onsite (India)

- Architect and maintain **TypeScript/Node.js & NestJS** backend services handling multi-source data ingestion, synchronizing real-time operational records across partner APIs and webhooks for **25,000+ transactions daily**.
- Engineered optimized **PostgreSQL** relational queries, composite indexing, and JSONB aggregations, cutting dynamic multi-filter query response times by **68% (from 6.7s down to 2.1s)**.
- Designed fault-tolerant asynchronous event pipelines using background workers and webhooks to validate and normalize external data payloads, achieving **99.9% ingestion reliability** across 8 document formats with zero duplicate processing.
- Implemented centralized structured logging and distributed tracing across 4 microservices, reducing MTTR for third-party API errors by **45%** while authoring 12+ architectural RFCs to streamline team execution.

Senior Software Engineer | Linear, Imparo Technologies (B2B SaaS) — Mar 2023 – Apr 2026 | Remote

- Led full-stack engineering of enterprise web applications using **React, MUI, and TypeScript** paired with **Node.js & PostgreSQL** services, shipping **290+ features** and eliminating **73% of manual administrative workflows** across 9+ enterprise clients.
- Designed interactive data-exploration tables, customizable filter builders, and analytical dashboards using **React, MUI, and Chart.js**, supporting **13,000+ weekly active users** with sub-second interface rendering.
- Built a high-throughput tabular data ingestion pipeline processing validated bulk CSV uploads for **500+ records per batch**, implementing client-side validation previews and server-side schema verification with **<0.1% error rate**.
- Architected modular backend services with PostgreSQL, integrating external third-party services (SSO, payment gateways, notifications) with server-side RBAC and handling **50,000+ weekly automated document deliveries**.
- Collaborated directly with founders in an async-first remote startup culture, driving sprint execution, comprehensive code reviews, automated tests, and rapid weekly zero-downtime releases.

Software Engineer Intern | Infino (Fintech Startup) — Jul 2022 – Feb 2023 | Remote

- Developed backend APIs and data reconciliation workflows consolidating transaction feeds across multiple payment gateways (Razorpay, Cashfree), cutting daily settlement processing time by **17% across 10,000+ monthly transactions**.
- Engineered automated fee calculation logic and reconciliation models, lifting automated test coverage by **43%** across critical financial processing pipelines.

Software Engineer Intern | Nagarro (Enterprise Consultancy) — Jan 2022 – Apr 2022 | Remote

- Contributed to microservices development, tuned database queries to reduce response times by **5%**, and hardened API endpoint security.

PROJECTS

- **Multi-Source Data Ingestion & Query Engine** | TypeScript, NestJS, PostgreSQL, TypeORM, RxJS, Docker
  Built an opinionated NestJS service ingesting data from disparate REST APIs into normalized PostgreSQL schemas. Leveraged reactive **RxJS** stream pipelines for non-blocking payload transformation, batching, and sub-second querying across 10,000+ test records.
- **Enterprise React & MUI Data Management Console** | React.js, MUI, TypeScript, REST APIs, Redux Toolkit
  Engineered an administrative web console enabling business users to query, filter, and inspect relational datasets without code. Featured custom MUI components, dynamic multi-column search, inline editing, and client-side reactive transformations for fluid data exploration.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering in Computer Science — Chitkara University, Punjab — 2018 – 2022

Certifications: AWS Certified Developer (Associate) • Triplebyte Certified Engineer
